Form5

CITCE| Graduation Project| Software Report Evaluation

Project Title:		Date:
Examiner Name:		Time:

Criteria	A	B	C	D	
Abstract	Contains clear motivation, scope, methodology, and conclusion	Contains most of them in a clear way	Contains some of them or not clear enough	Totally not clear or does not contain any of them	
Introduction	Contains overview, motivation, scope of the project, objectives and procedure to achieve them	Contains most of them in a clear way	Contains some of them or all but not clear	Not clear or does not contain any of them	
Functional Requirements	Problem specific, clearly described, complete and measurable	Problem specific, not complete, or not clear enough	Too general requirements or partially not measurable	Totally not clear	
Non- Functional Requirements	Problem specific and clearly described	Not Clearly described	Mixture with functional and not clear	Totally not clear	
Use Cases	Have been effectively and correctly employed to describe the requirement	are correctly used but does not cover the full requirements	Contain some serious errors in modelling the requirements.	There is no use cases or any alternative	
Handling Alternatives	The report presents a set of arguable alternatives and justification on the selected one	The report presents limited arguable alternatives and justification on the selected one	The justification is not rational	The students show one and only one option throughout their work	
Design consistency	The requirements are completely reflected in the design	The requirements are mostly reflected in the design	They are partially covered	There is a major gap between design and req.	
Modeling	Systems, Objects or database are modeled effectively with the correct modeling approach and with enough justifications	The models are valid but with not enough justifications	The models contains some errors or there is no justifications	There is no modelling	
Demonstrations	There is enough demonstration and explanation about how the system works	There is enough demonstration but the explanation is shallow	The demonstration is not enough	There is no demonstrations	
Testing	Testing targets the core modules and includes the Test plan, test design specification, test case specification, test procedure	Testing targets core modules but is not sufficiently explained	Testing does not target core modules. Or it is shallow	No Testing	
Conclusion	Conclusion includes summary of the delivered artifacts, challenges faced, interesting decisions,, recommendations and future releases	Conclusion includes summary of most of them	Conclusion includes summary of few of them	Conclusion does not include any of them	
Language	The language in the report is excellent and typo free	The language is very good and few typos	The language is acceptable but contains many typos	The language is not acceptable	
Layout	The structure, sectioning and numbering are suitable throughout all the report	The structure, sectioning and numbering are suitable most of the time	The structure, sectioning and numbering are not consistent	They are ill and needs major work
